CAPSTONE TITLE PROPOSAL FORM

Name of the Proponent/s:
Barros, Dizire
Labagala, Neriza Mae
Laureno, Nicole
Maiquez, Akira Rio
Nacen, Viviene

Course: Bachelor of Science in Information Technology **Date:** Aug, 5 2025

1.0 Proposed Capstone Title:

Development and Implementation of a Tracking System for HSN Company

2.0 Area of Investigation

This project involves designing and implementing a web-based tracking system that manages both applicants and employees under specific departments in the HSN company. The system will include role-based access for Admins and Department Managers. It will allow for applicant submissions, employee tracking, status monitoring, and real-time notifications via email using SMTP. Admins can oversee all departments and employees, while each Manager has access to their designated department only. The system ensures a streamlined hiring process by enabling approval or rejection of applicants with automatic email notifications sent upon decision.

3.0 Reason for Choice of Study:

Currently, tracking applicants and employees across different departments in many organizations is a manual or semi-digital process. This often leads to data loss, miscommunication, and inefficiency in recruitment and employee management. The researchers chose this study to address such challenges and digitize the process of hiring, tracking, and organizing workforce data by department.

The system also enhances transparency in the recruitment process and helps HSN manage departmental records more effectively. Including an SMTP-based email notification feature further increases professionalism and automates communication with applicants.

4.0 Importance / Significance of the Study:

- Streamlines recruitment by automating application reviews and approvals.

- Organizes employee records based on their departments for easier management.
- Helps Department Managers focus only on relevant data.
- Ensures applicants receive timely email updates on their status.
- Reduces paperwork and manual errors in tracking personnel.
- Improves transparency and accountability in HR operations.

5.0 Target Beneficiaries:

- **Applicants** – Receive clear and timely updates about their application status.
- **HR/Admin Team** – Centralizes control of applicant and employee records.
- **Department Managers** – Can manage their team more efficiently.
- **HSN Company** – Gains a structured and scalable system for workforce tracking.
- **IT Personnel** – Can maintain and extend the system for future upgrades.

6.0 Similarities with any Previous Study / Project / System (at least 3):

According to **Kumar & Sharma (2020)**, centralized HR systems improve departmental workflows by allowing access controls and role-specific data views, reducing bottlenecks and errors.

Alvarado et al. (2019) noted that tracking systems with email notification features enhance communication transparency and improve applicant satisfaction by closing feedback loops.

Gonzales & Chen (2021) emphasized that digital recruitment platforms with departmental filters and multi-level approval workflows increase the efficiency of human resource operations in multi-branch companies.
